Recommendations to grow subscriptions

Business Context

The CEO's ask

Grow Bright TV's subscriber base this financial year. Customer Value Management needs evidence-based insight into who watches, what they watch, when, and why.

Four questions answered in this deck

- What are the user & usage trends on Bright TV?
- What factors influence consumption?
- What content should we run on low-consumption days?
- What initiatives will grow the user base?

Data & Methodology

Sources

- Viewership: 10,000 sessions from CSV file
- User Profiles: 5,375 subscribers
- Period: 1 Jan – 1 Apr 2016
- Times converted UTC → SAST

Pipeline (Medallion)

- Raw data load to Databricks
- Clean, type-cast, derive features
- Aggregated tables for Power BI
- Excel export → Power BI

Tools

- Databricks SQL
- Power BI
- PowerPoint

Key Insights for the CEO

- Sport drives the platform: Cricket WC + SuperSport ≈ 54% of all minutes.
- 84.5% of users are "Casual" (≤30 min total) → huge upsell opportunity.
- Indian/Asian segment averages 13.2 min/session — 47% above platform mean.
- Gauteng + Western Cape contribute 56% of minutes; NW & NC under-indexed.
- Monday & Sunday are slowest days → programming gap to fill.
- Prime time = 16:00-18:00 SAST, not the global 19:00-21:00 norm.

54%

of all minutes come from
Cricket WC + SuperSport

Top 5 channels also include Channel O,
Trace TV and SuperSport Blitz

What this means

- Sport + music dominate viewing - entertainment & lifestyle channels under-perform.
- Cricket World Cup spike ended in March → expect a Q2 dip without a sport replacement.
- Acquisition pitch should lead with sport rights; retention pitch should bundle music/lifestyle.

Who Watches Most

Indian / Asian

13.2 min/session

+47% vs platform avg

Free State

10.7 min/session

Highest provincial avg

Age 45–54

10.3 min/session

Most loyal age band

Male audience

89% of minutes

But also ~89% of users — share is proportional

When Bright TV is Watched

Two clear behavioural patterns

Prime-time = 16:00–18:00 SAST

Peak hour is 17:00 (≈7,500 min). The platform peaks 2-3 hours earlier than global TV norms - consistent with after-school / after-work sport viewing.

Saturday is king

Saturdays generate 17.4k minutes (vs 11.5k on Sundays and 6.8k on Mondays). Weekend uplift correlates strongly with sport fixtures.

Below-average days → Monday, Sunday, Tuesday

These are the slots that need new programming or marketing pushes.

84.5% of users are "Casual"

0.3%

Power User

≥120 min & ≥10 active days

6.6%

Engaged

≥30 min & ≥4 active days

84.5%

Casual

Some viewing but low intensity

8.6%

Dormant

Profile exists but never watched

The single biggest growth lever is converting Casual → Engaged.

Recommendations to Grow Subscriptions

Lead with sport

Renew/expand cricket & SuperSport rights; build sport-led acquisition campaigns.

Fill the slow-day gap

Sun & Mon need new content: live music events on Channel O / Trace TV, family blocks on Boomerang / Cartoon Network.

Win back the Casual 84%

Trigger personalised "you missed..." notifications after 7 days inactive, anchored on each user's favourite channel.

Geo-target under-indexed provinces

NW & NC contribute <5% of minutes despite being 9% of subscribers — run regional pricing & data-bundle promos.

Premium tier for the Indian/Asian segment

+47% session length signals willingness to pay; pilot a cricket+Bollywood premium pack.

Reactivate the Dormant 8.6%

One-month free re-onboarding tied to live sport calendar; if no return → archive to control churn metrics.

Thank you

Questions, deeper dives & next-step planning welcome.
